

MADE FROM 80% REGROWING RESOURCES

## AirWave PaperWave®-Bio

With our revolutionary new product AirWavePaperWave®-Bio, FLOETER is setting the bar for environmental protection. Made largely from 85% recycled paper (FSC certified), combined with an ultrathin layer of compostable sealant film the AirWave PaperWave®-Bio air cushion has achieved superior ecological benefits.

# AirWave PaperWave®-Bio recycling paper/compostable air cushions

AirWave PaperWave®-Bio has a very thin seal layer made of a starch based compostable Film, which has been confirmed not to affect the recyclability of the paper. The product is 100% recyclable by pulping (if a repulping plant is available). The product bears the RESY mark as well as the sorting-aid-symbol according to DIN 6120. This makes it very easy for the consumer to decide on the correct recycling bin at disposal. The material is compostable and even degrades in Marine environment when mistakenly ending in water.

**100% recyclable by repulping**

**100% bio-degradable**

**> 80% made of regrowing resources**

With today's repulping technology, the paper and sealant layer will be separated during the recycling process.

This enables the new AirWave PaperWave®-Bio air cushion film to be recycled with the normal wastepaper or the bio-compostable waste.

100 x 210 mm and 150 x 210 mm (4x8" and 6x8") in stock  
other sizes and seal pattern on demand
